

My ref: Parent Letter – Spring 2022  
Date: 4<sup>th</sup> January 2022  
Contact: Please contact your school  
for more information

To parents/carers of pupils in  
Cambridgeshire and Peterborough  
Schools and Colleges

Public Health Directorate  
Education Directorate

Dear Parent / Carer,

As you will be aware, Covid-19 is sadly still with us as we go into 2022. We are once again seeing a rapid increase in cases in Cambridgeshire and Peterborough and across the country. With the start of the new term, we wanted to thank you for your support during this incredibly challenging time.

Our priority is to keep all students and staff safe and well, and ensure we are able to identify any new cases at an early stage, including when people have no symptoms. Early identification will help us to prevent onward transmission and minimise case rates in our education settings. If fewer children get Covid, fewer children will have to isolate, and they will not spread it to vulnerable adults who may get unwell and need hospitalisation. The Local Authority will continue to work closely with school leaders to minimise any disruption to learning. School leaders and Public Health teams will be monitoring the impact of cases on pupils, their families and the workforce. If your child's school needs to return to remote learning, the school will notify you at the earliest possible stage.

The Government have updated their guidance in recent weeks and alongside our guidance locally, the key messages for this term are below –

- The Government is temporarily recommending that face coverings are worn in classrooms and teaching spaces for students in year 7 or above (those aged 11 and over), in light of the highly transmissible Omicron variant surge. Teachers will not be required to wear face coverings in classrooms. This builds on the existing guidance that recommends face coverings for all adults in communal areas of all settings and for pupils on school as well as public transport. The advice on face coverings in classrooms will be in place until the 26 January, when Plan B regulations are currently scheduled to expire.
- Local Authorities, Directors of Public Health and Health Protection teams may recommend measures described in the [contingency framework](#) in individual education and childcare settings – or a small cluster of settings – as part of their outbreak management responsibilities.
- Parents and other visitors are strongly advised to take a lateral flow device (LFD) test before entering the premises of a childminder, early years setting, school, or college. All visitors to schools to wear face coverings in school buildings and whilst on the school site.
- If the number of positive cases substantially increases in your child's early years setting, school, college, or area, you might be advised to increase the use of lateral flow device (LFD) testing. This could also include advice on the reintroduction of onsite LFD testing for secondary age pupils.
- If you have a case of Covid-19 in your household, please refer to the diagram at the end of this letter for the current advice on how to minimise infection spreading in the household. Household and community transmission is likely to be the key factor in impacting upon schools.

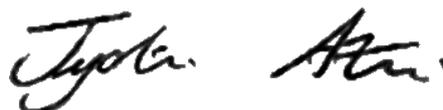

- To protect staff, we have recommended that they socially distance and staff meetings should remain virtual. Schools will also consider their own circumstances, but we recommend that until the end of January all non-essential events where parents visit schools are to be held virtually if possible.
- Secondary school pupils will be required to take one on-site test when they return to school this week. We continue to promote the importance of twice-weekly LFD testing for staff and students in secondary schools and staff in primary schools. There is no need for primary age pupils (those in year 6 and below) to test regularly, unless they have been identified as a contact for someone who has tested positive for Covid-19 and therefore take lateral flow tests every day for 7 days. Schools will notify you of this process should your child be identified as being a close contact.

As well as the measures above, it is important that we all continue to wear face coverings, wash our hands regularly for at least 20 seconds, meet people we don't usually meet outdoors or in well ventilated spaces, and keep our distance from people where possible. It is through working together that we will have a better chance of stopping Covid-19 spreading. We know that school leaders have really appreciated the support of parents and carers in managing the impact of the pandemic and as we move into this next period, we thank you for your continued efforts.

Yours sincerely,

Jonathan Lewis

# How to reduce the spread of infection with the people you live with if you have COVID-19.

If you have COVID-19, there is a high risk that others in your household will catch it from you. There are several things you can do to reduce the spread of infection in your household.

- 1 Limit close contact with others. Spend as little time as possible in communal areas.

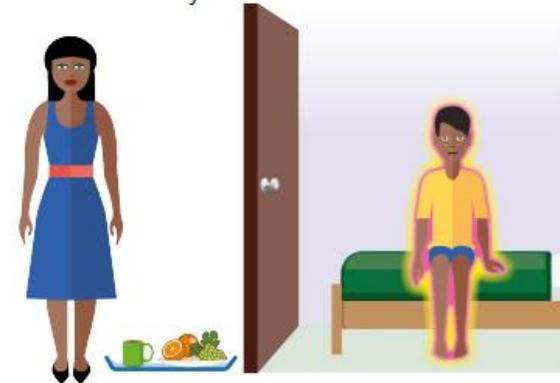

- 2 Regularly clean frequently touched surfaces and shared rooms like kitchens and bathrooms.

- 3 Wash your hands regularly using soap and water, particularly after coughing and sneezing.

- 4 Get help where possible from those you live with. Ask for help with cleaning and being brought food safely to avoid unnecessary contact.

- 5 Use a face covering if you need to spend time in shared spaces.

- 6 Keep rooms well ventilated.

- 7 Catch coughs and sneezes in disposable tissues and put them straight in the bin.
